

LS1240A

LINEAR INTEGRATED CIRCUIT

ELECTRONIC TONE RINGER WITH BUILT-IN BRIDGE RECTIFIER

DESCRIPTION

The UTC **LS1240A** is monolithic integrated circuits and designed to be as a telephone ringer. It can drive a piezo-ceramic converter(buzzer) directly. The output current capacity of UTC **LS1240A** is higher than standard ringer. For driving a dynamic loudspeaker, UTC **LS1240A** needs only a decoupling capacitor to replace the usual transformer in use.

FEATURES

- * Low current consumption.
- * Integrated rectifier bridge with zener diodes to overvoltage Protection.
- * Minimum external circuitry.
- * Both frequencies of tone and switching are adjustable by external components.
- * Integrated voltage and current hysteresis.

■ TYPICAL APPLICATION CIRCUIT

No current limitation is provided on the output stage of UTC **LS1240A**, so a minimum load DC of 50 ohms is advised.

The two tone frequencies generated are switched by an internal oscillator in a fast sequence and made audible across an output amplifier in the loudspeaker, both tone frequencies and the switching frequency can be externally adjusted. The signal and the circuit is designed so that noise on the line or variations of the ringing signal cannot affect correct operation of the device.
