SVC Varistors Type

Introduction

SVC series Varistors are gapless ceramic surge absorbers of a new type made of metal oxide which is designed to protect various kinds of electronic devices and semiconducting elements from surges.

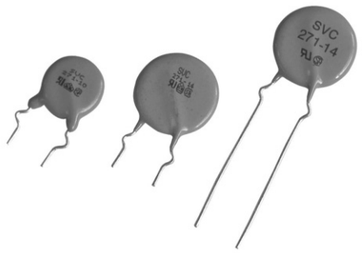
Features

- High discharge current capability up to 4000 Amps.
- Excellent clamping characteristics.
- Fast response time under 50 nanesesconds.
- Improve Product safety
- UL, CSA, VDE recognized

How to Order

SVC 471 D-14A FF 7

1 2 3 4 5 6 7



1 Basic Type
ZnO Varistor

2 Varistor Nominal Voltage
(The first two digit indicate significaticant digits)
(The 3rd digit indicate the number of zeros following)

3 Style
D : Disk Type Varistor

4 Chip Element Size(Dia)
05 : Ø5mm, 07 : Ø7mm,
10 : Ø10mm, 14 : Ø14mm,
20 : Ø20mm

5 Classification
A : High Voltage(82V and above)
B : Low Voltage(less then 68V)

6 Packing Style & Lead Variation

7 Lead Spacing & Pitch of Component

Packing Style		Lead Variation		Packing Style		Lead Variation	
F	Taping Type Flat Pack	S	Straight Type	B	Bulk	S	Straight Long Type
						W	Kink Short Type
		K	In-Kink Type			K	Kink Long Type
						L	Kink Short Type
		F	Out-Kink Type			N	Straight Short Type

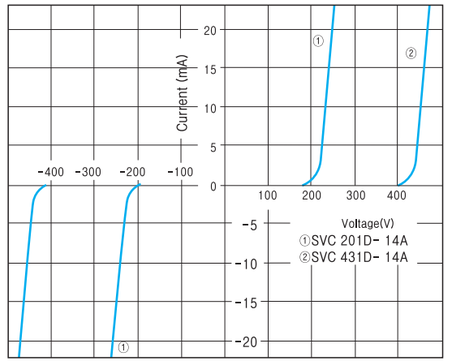
Suffix Code

Taping Type			Bulk Type	
Code	Lead Spacing(mm)	Pitch of Component(mm)	Code	Lead Spacing(mm)
5	5.0	12.7	5	5.0
7	7.5	15.0	7	7.5
8	7.5	30.0	1	10.0
9	7.5	25.4		
1	10.0	30.0		

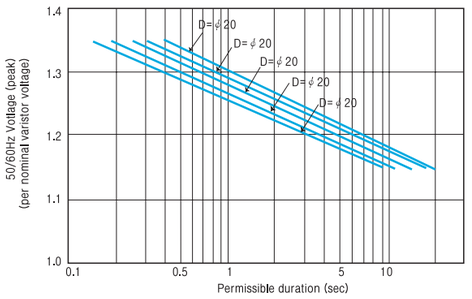
SVC Characteristic Curves

V – I Curve

• Small - current region of V - I curve

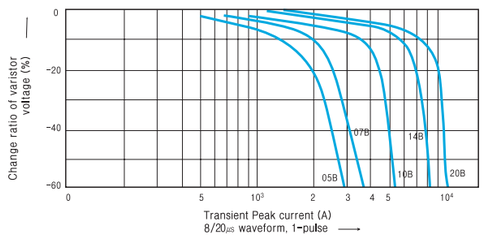


• Temporary power frequency over voltage capability



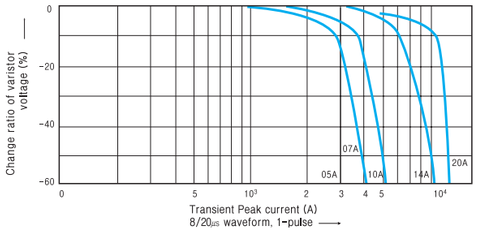
B Type

• Withstand discharge impulse current characteristics(Typical)



A Type

• Withstand discharge impulse current characteristics(Typical)



Specification

Device Type	Chip Element Size	Maximum Ratings					Characteristics					
		Applied Voltage		Transient			Nominal Varistor ④ Peak Voltage			Max. Clamping ⑤ Voltage @ Test Current(8/20㎲)		Typical Capacitance

Notes :

① The waveform of the maximum DC applied voltage is flat. When a ripple voltage as from a rectifier source is supplied make sure that the peak voltage is kept under th Vdcm An AC applied voltage(50/60Hz) form a since waveshape. When the distortion in the waveform is extensive make sure that the peak voltage is less than $\sqrt{2}$ times the Vacm.

② Energy : Wtm
Transient energy ratings are given in the Wtm column of the specifications in Joules(watt-second). The rating is the maximum allowable energy for a single impulse of 2ms square-waveform current with continuous voltage applied. Energy ratings are based on a shift of Vnom of less than ±10% of initial value.

③ Transient peak current(Itm)
The peak current rating. Itm. of varistor is based on an 8/20 μs test impulse waveshape. This peak current is the maximum peak current in which the nominal varistor voltage shift does not exceed ±10% when the test impulse is applied once at 5 mimutes intervals.

④ Nominal varistor voltage : Vnom
Indicates the varistor terminal voltage measured with a 1mA DC applied. -0.1mA DC in the case of the 0.5A and 05B series.

⑤ Maximum clamping voltage : Vc
Indicates the peak teminal voltage measured with an 8/20μs impulse current applied.

- Operating ambient temperature : -40℃ to +80℃
- Storage temperature : -40℃ to +125℃
- UL and CSA recognized(UL 1449, UL 497B or UL 1414, CSA)
  SVC varistors have been tested by Underwriter's Laboratories, Inc. and Canadian Standards Association
  UL File No. E97754, E151195, E154171.
  CSA File No. LR78923.

20A(SVC 820D-20A to SVC 471D-20A)

Applications

- The Protection of semiconducting elements such as diodes, thyristors, transistors, IC and relays against transient Voltages.
- Similar protection of many types of measuring instruments, control machinery and communication equipment and broadcasting equipment against inductive lightning and switching surges.
- Protection of general purpose electrical equipment, domestic mechinery and appliances. TV and radios and similar consumer products against lightning and switching surges.

Power Supply Circuit Protection

Line circuit

Varistor voltage selection table (Z_L)

Power Supply Voltage	Type
100V AC	SVC201D -□ □A SVC221D -□ □A SVC241D -□ □A SVC271D -□ □A*
200V AC	SVC391D -□ □A SVC431D -□ □A SVC471D -□ □A*
12V DC	SVC220D -□ □B
24V DC	SVC390D -□ □B

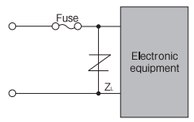
Notes :

① The power supply voltage must not exceed the maximum allowable circuit voltage.

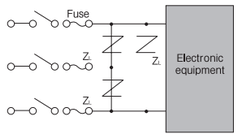
② Since independent wiring loads and capacitive loads cause the voltage build-up at the time of opening or closing the load, use SVC having a varistor voltage as high as possible.(*mark)

③ The bold faced portions of the type letters vary.

AC/DC single-phase circuit



AC three-phase circuit



Line and groud circuit

Varistor voltage selection table(Z_E)

Power Supply Voltage	Type
100V AC	SVC431D -□ □A
200V AC	SVC471D -□ □A SVC751D -□ □A to SVC112D -□ □A* SVC182D -□ □A**

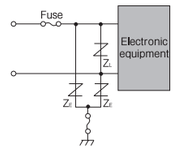
Notes :

① When subjected to megger testing(500V DC), the insulation resistance value can decrease due to the leakage current of the SVC, To avoid this remove the varistor or use* marked SVC.

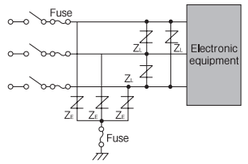
② When subjected to dielectric strength test(1000V AC). remove the SVC or use** marked SVC.

Select varistors taking a note of operating conditions peculiar to the equipment.

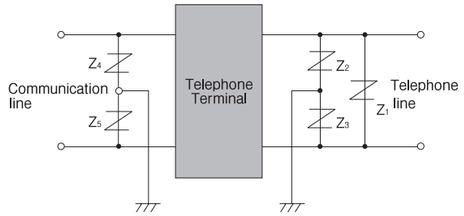
AC/DC single-phase circuit



AC three-phase circuit



Telecommunication Circuit Protection



Varistor voltage selection guied

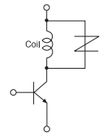
Power Supply Voltage	Type
12V DC	SVC180D -□ □B SVC220D -□ □B SVC820D -□ □A
24V AC	SVC390D -□ □B SVC820D -□ □A

Notes :

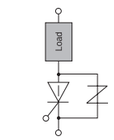
The varistor SVC has a capacitance value. Take not of this when applying them to high-frequency signal circuits.

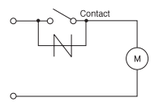
Switching Circuit Protection

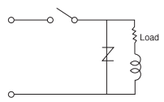
Protection of relay (Contact coil)



Protection of semiconductors







Varistor voltage selection guide

Power Supply Voltage	Type
12V DC	SVC220D -□ □B
24V DC	SVC390D -□ □B
100V DC	SVC151D -□ □A
100V AC	SVC201D -□ □A SVC221D -□ □A SVC241D -□ □A SVC271D -□ □A

Notes :

① The power supply voltage must not exceed the maximum allowable circuit voltage of the SVC

② Pay due attention to the surge energy generated by the load.

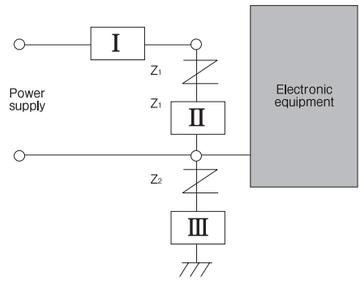
③ Select SVC referring to the pulse lifetime rating.

④ To further reduce the tendency of sparking across the contacts connect a capacitors parallel with the SVC. This will also protect the equipment from electromagnetic wave jamming.

Application Notes

Overcurrent protection

When surges exceed the rating for the SVC, short-circuits or damages can be expected. Take following precautions.



① Connect the SVC at a position nearer to the equipment than the overcurrent protection device " | "(fuse, MCCB) as is shown in the diagram.
When the SVC is shorted, the overcurrent protection device " | "operates (trips or blow off the fuse).

② If the overcurrent protection device " | "can not be installed in " | "position, connect a fuse at " || "position. Select fuse rated current for the SVC referring to the following table.

SVC	05A 05B	07A 07B	10A 10B	14A 14B	20A 20B
Applicable fuse rated current(A)	1 to 2	2 to 3	3 to 5	3 to 10	5 to 15

③ When "Z_2" SVC is connected between the equipment and ground install an ELCB (Earth Leakage Circuit Breaker). If not possible, connect a fuse or thermal fuse at " ||| " position.

Installation

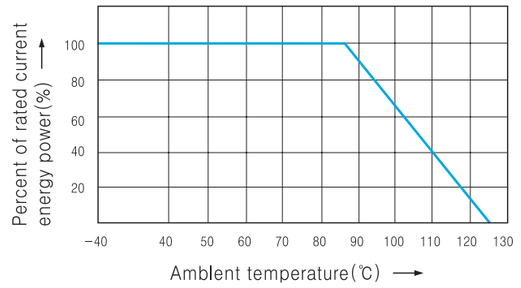
① When operated at location near heating element or exposed to direct sun light, confirm that the ambient temparature range.

② When operated in dusty or dirty locations, or exposed to corrosive atomospheres, or where metallic powders or salt can be expected, be sure to mount within a protective enclosure.

Molding

When shielding the SVC in a resin molding, take a note of the materials used and temperature, since they influence the reliability. For further information please contact SAMWHA

Current, power and energy rating vs, temperature



Electrical Characteristics

Operating ambient temperature	−40℃ to +85℃
Storage temperature	−40℃ to +125℃
Voltage temperatur coefficient	−0.05% ℃
Insulation resistance(at500V)	Over 1000MΩ

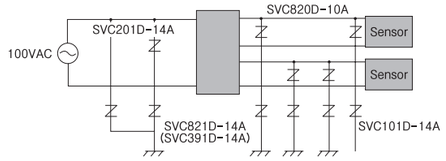
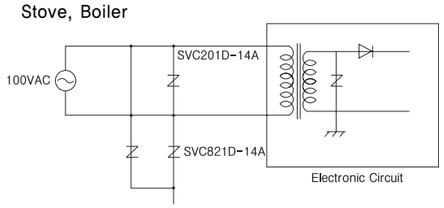
ISO 9001:2000		94. 12. 15				ID03/0294

Application Exampel

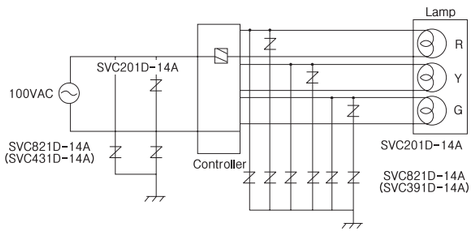
Fire Alarm System



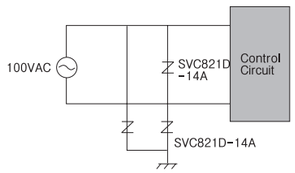
Stove, Boiler



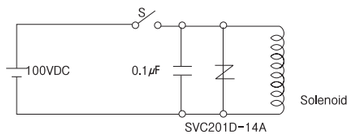
Traffic Signal Control



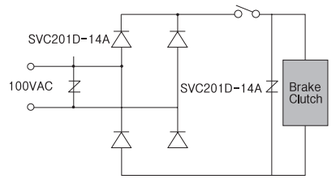
Vending Machine



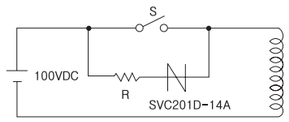
Solenold



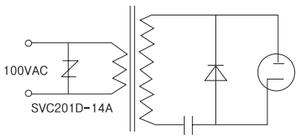
Brake, Clutch



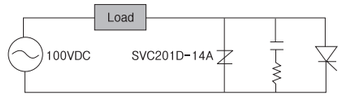
Contect Protection



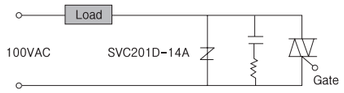
Microwave Oven



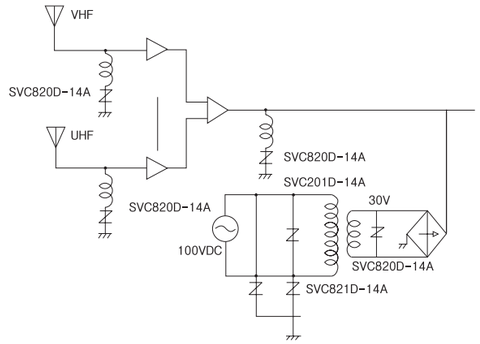
Thytister Protection



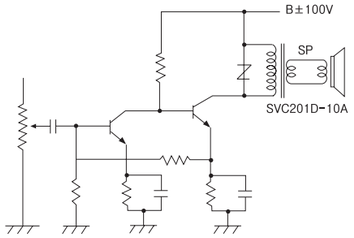
Triac Protection



TV Booster



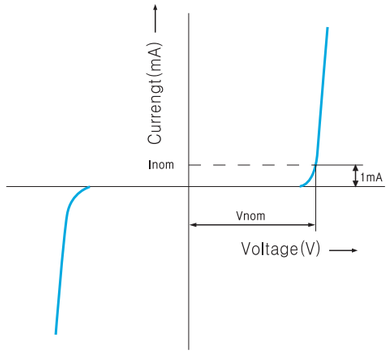
Sound Output Circuit



Varistor Terminology

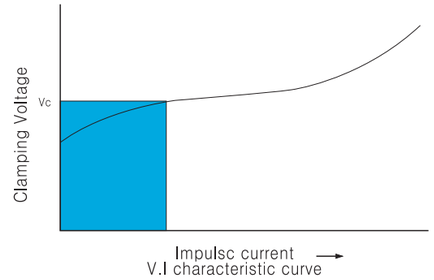
Varistor Voltage : Vnom

Varistor peak terminal voltage measured with a specified current applied The DC current applied is 1mA normally.



Clamping Voltage : Vc

Maximum terminal voltage (peak voltage across the varistor) measured with an applied 8/20μs impulse of a given peak current.



Capacitance

Typical values measured at a test frequency of 1kHz

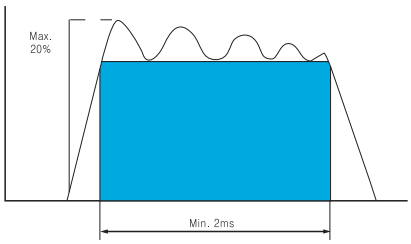
Rated peak transient current : itm

Maximum peak current through the varistor with line voltage applied.

The maximum peak current with in the varistor voltage change ratio of ±10% with the standard 8/20㎲ impulse current applied two times at 5 minute interval.

Rated transient energy : Wtm

Maximum allowable energy for a single impulse of 2ms square-wave current waveform with rated continuous voltage applied. Maximum energy rating base on a shift of Vnom of less than ±10% of initial value.



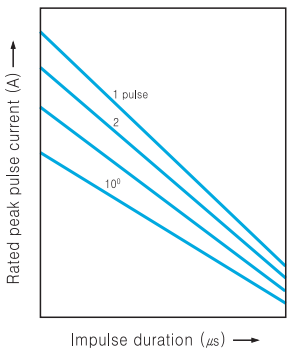
Waveshape of square-wave current

Pulse lifetime rating

This is expressed as the maximum allowable number of impulse currents applied.

8/20㎲ impulse current(or 2ms square wave) is applied at prescribed interval.

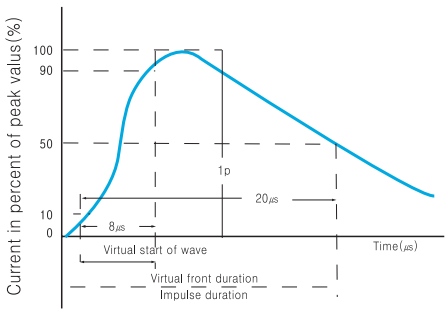
This curve also provides for derating current as required with repetitive pulsing.



Test current waveform

Characteristics tests for Varistors are carried out by using 8/20㎲ test impulses Data such as the maximum clamping voltage(Vc)and the transient peak current(Itm) are obtained by using this impulse current

However, for the Vc characteristics of the Axial Package type a 10mA DC squarewave current is used to cary out the test.



Rated RMS Voltage : Vacm

Maximum continuous sinusoidal RMS voltage at 50/60Hz which may be applied.

Rated DC Voltage : Vdcm

Maximum continuous DC voltage which may be applied.

Rated average power dissipation : Ptam

Maximum average power that can be applied within the specified ambient temperature.
